

MANDEGUSU (EDDYSTONE ISLAND)

1. The small island called Eddystone lies south of that named Ronongo, and is the farthest west of the islands of the New Georgian Archipelago. It "is nearly cut in two by the deep bay of Narovo." "The northern parts consist of hills with easy slopes, the southern is very steep, rising to 1100 feet at Matendini and 1025 feet at Patukio. It is flanked on its eastern side by the island of Simbo."

"The native name of Eddystone is Mandegusu, which means 'The Four Villages.' These four villages or districts are: Narovo round the bay, Ove on the south-west coast, Simbo on the little island flanking the main one, and Karivara on the eastern slopes of Matendini. To the white men and the natives of Roviana and Nduke the whole island is known as Simbo, after the third named district¹."

2. A vocabulary of the language of "Eddystone Island" was published by Cheyne so long ago as 1852², and was quoted in full by Gabelentz³. A vocabulary of Simbo was published by Ribbe in 1903⁴. This is less correct than Cheyne's and contains Roviana words which differ from Eddystone.

A Simbo vocabulary (three hundred and three words) by Mr T. W. Edge-Partington in 1906 is among the Woodford MSS.

3. In 1908 a systematic study of the Eddystone islanders was made by Mr A. M. Hocart and the late Dr W. H. R. Rivers. The relationship names were published by the latter⁵, and many Mandegusu words appear in Mr Hocart's account of the "Cult of the Dead" and "Witchcraft⁶." Mr Hocart also compiled a vocabulary containing nearly 1600 Mandegusu words, and has very kindly allowed me to use this for the comparative notes in this book.
